Information Security

He has been working in the field of information security since 2012 for hobby purposes. During these studies, he provided security consultancy and pentest services to many companies. In addition to information security; He also consulted on social engineering, penetration testing, network security, and application security. Some of the companies he serves;

project of Turkcell, Turkey's largest GSM operator.

In October 2017, he became the person responsible for one of the critical modules within the project. During the year he worked in this position, he took the responsibility of the business as a contact person with the customer and served as a Lead Developer.

In October 2018, a team was formed to maintain and develop Turkcell Global Bilgi's corporate applications. He served as Solutions Architect at the head of this team, which varied between 10-15 people depending on the project and needs. In this process, he undertook all the processes from the establishment of the team to the management of the relations with the customer. He provided development support and technical support services with his team on 20+ projects for the customer.

IT Manager
Istanbul Commodity Exchange *2015 - 2017*

He was assigned to manage the information technology team of 5 people and to meet all the software and hardware needs of the company's 120 personnel in 5 different locations.

Reorganized the network infrastructure where security and authorization were not enough. Adjusted user authorizations, maximizing security and authorization by adjusting internet access rules, file shares, and a firewall. In addition, he made it all user actions within the network can be monitored, automatically alerted, and controlled.

IT Manager Assistant
Ankara Sigorta *2014 - 2015*

He realized that all source codes and databases could be accessed thanks to a security vulnerability he found on the Ankara Insurance website. Following the notification of this vulnerability, he was assigned to the company's 12-person information technology team as Assistant Manager responsible for the software.

He focused on performance issues in the recently written infrastructure with .NET Framework.

Senior Software Developer
Doğan Gazetecilik *2012 - 2014*

He worked actively during the development of the Live Score project, which was developed on the broadcasting of the live results of sports games, especially football. The project was implemented on MSSQL using ASP.NET MVC. He used Angular JS and Knockout JS so that the scores could be given to the visitors as quickly as possible. Together with NetScaler, he has prepared a system that can serve 65,000 instantaneous visitors without any performance loss.

Software Developer
Kariyer.net *2012 - 2012*

Software Developer
IRM Ajans *2009 - 2012*
